FAX COVER SHEET

TO:	Elation Physical Therapy	FROM:	Holista, LLC
FAX:	1(713)868-7575	FAX:	866-231-6344
WEBSITE:	elapwp.therapyadmin.com	PHONE:	888-560-6855
DATE:	February 17, 2026	# OF PAGES:	2
SUBJECT:	Requesting medical records		

To whom it may concern:

Claims for **BARBARA KIMMICH, ID # W207969795, DOB 04/25/1970** have been pended for review "Medical Necessity". In order for Aetna to process the claim(s) that have been pended we will need the patient's medical records.

What is needed within the medical records?

- Copy of script. This should include diagnosis, plan of care with frequency and duration.
- Copies of all daily therapy notes and the last three (3) progress summaries. These should include the expected degree of functional improvement, the prognosis and any other information needed to show medical necessity.

Please include date(s) of service: **2/10/2026- present**

Authorization(s): **A0251230196758**

Please email or fax all requested information to Holista within five (5) business days so the claim(s) can be reviewed and processed. Should you fail to respond, we may recoup our payment to you and you will not be able to bill the member.

Please let the member know that claims need review for medical necessity, if Aetna denies the claims after review, the member will still be responsible.

Thank you.

Subjective Analysis

Patient Self-Report

Patient continues to feel very frustrated that she feels like her ROM is not improving and she still has a lot of pain when trying to push it. Her surgeon had a heart attack so she isn't able to get back in to see him right now but she will see another MD in the same office tomorrow.

HPI: The patient is a 55-year-old female who serves as a Director of Research and Development and is presenting for post-operative rehabilitation following a left total knee arthroplasty (L TKA) performed on October 27, 2025.

Assessment

Patient Assessment / Diagnosis

Barbara tolerated treatment session fairly well today. Objective measurements re-assessed today on her 17th visit. She has met 3 of her 6 long term goals. She has made good progress functionally. She still feels frustrated that she is working on her ROM so hard but still having pain. Her L knee ROM measures at 4-100 degrees which is really not behind for this stage post op (7 weeks since surgery). Her strength is measuring well also. Encouraging patient that she is not as behind as she thinks and discussed asking the doctor if there were other ways she could manage her pain/inflammation. She was working on HEP 4x/day but I told patient to back down to 2x/day. Barbara will continue to benefit from skilled PT intervention to address remaining impairments.

11/21: Ms. Kimmich has attended a total of 10 visits and has met 2 functional long-term goals. The patient demonstrates significant progress toward remaining goals, with improvements noted in strength, ROM and decrease pain levels. Current presentation indicates progressing tolerance in performing functional tasks such as ADLs, ambulation, recreational activities and house hold chores. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

Pt presents with signs and symptoms consistent with diagnosis of: s/p L TKA (10/27/25)

Contraindications to Therapy

None.

Rehab Prognosis/Potential

Excellent

Goals

GOALS			
GOAL	DURATION	GOAL PROGRESS	GOAL TERM
Pt will be able to walk independently for at least 1 mile without significant discomfort in order to resume travel for research and conduct meetings effectively.	12 weeks	(100%)	Long Term
Pt will be able to perform grocery shopping independently at least once a week in order to regain autonomy in managing home duties and running errands.	12 weeks	(100%)	Long Term
Pt will be able to cook meals for at least 5 hours per week in order to manage household responsibilities and maintain a balanced diet.	12 weeks	(100%)	Long Term
Patient will decrease Left Knee pain to 0-1 / 10 in order to improve ambulating.	8 weeks	(50%)	Long Term
Pt will increase the LEFS score to >= 60 indicative of an increase in overall functional mobility and decrease in pain.	8 weeks	26 --> 47 --> 56/80 (75%)	Long Term
Pt will increase L. knee AROM to 0-110 degrees.	8 weeks	(75%)	Long Term

Plan**Notes on Plan**

Continue PT POC and progress as tolerated.

Functional, therapeutic, exercise-based, and manual therapies will be provided throughout treatment. Home exercises will be sent and monitored via patient education programming. Pt will be educated throughout treatment plan to ensure that they understand their condition, and instructions as to progress with their function. PT strongly recommends conservative management w/ emphasis on general stretching, strengthening, and functional mobility training.

Possible Procedures Treated over full course of treatment

97161, 97530, 97112, 97140, 97014

Possible Modalities Treated over full course of treatment

Additional Modalities: The following modalities may be used throughout the Physical Therapy Plan of Care in order to provide pain relief, decrease inflammation, increase blood flow, and/or improve tissue healing: manual therapy techniques, aquatic therapy, electrical stimulation, dry needling, hot/cold packs, vasopneumatic compression, ultrasound and kinesiotaping.

Patient Education

Patient has been educated on the rehabilitation process involving the likely mechanism of injury, diagnosis, prognosis, plan of care and other particular documents that are within the scope of Physical Therapy Practice. PT assigned and reviewed HEP for competence, and the patient has demonstrated independence w/ accessing and executing it.

FREQUENCY OF TREATMENT	DURATION OF TREATMENT
3x every week	until 12/11/2025
2x every week	until 12/18/2025
2x every week	until 1/31/2026

SERVICES PROVIDED DURING VISIT		
CPT CODE	UNITS	MINUTES
97530	1.000	18
97110	1.000	15
97140	1.000	10
97164	1.000	10
Total Timed Code Treatment Minutes		43
Total Treatment Time		53

The patient (parent/guardian/power of attorney holder) was educated on diagnosis, prognosis, and treatment goals and actively participated in creating goals and agrees to the current treatment plan.

Assessment

Patient Assessment / Diagnosis

Pt has attended a total of 9 visits and has met 3 functional long-term goals. The patient demonstrates moderate progress toward remaining goals, with improvements noted in strength and ROM. Current presentation indicates continued limitations in performing functional tasks such as ADLs and recreational activities. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

PN 12/15: Barbara tolerated treatment session fairly well today. Objective measurements re-assessed today on her 17th visit. She has met 3 of her 6 long term goals. She has made good progress functionally. She still feels frustrated that she is working on her ROM so hard but still having pain. Her L knee ROM measures at 4-100 degrees which is really not behind for this stage post op (7 weeks since surgery). Her strength is measuring well also. Encouraging patient that she is not as behind as she thinks and discussed asking the doctor if there were other ways she could manage her pain/inflammation. She was working on HEP 4x/day but I told patient to back down to 2x/day. Barbara will continue to benefit from skilled PT intervention to address remaining impairments.

11/21: Ms. Kimmich has attended a total of 10 visits and has met 2 functional long-term goals. The patient demonstrates significant progress toward remaining goals, with improvements noted in strength, ROM and decrease pain levels. Current presentation indicates progressing tolerance in performing functional tasks such as ADLs, ambulation, recreational activities and house hold chores. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

Pt presents with signs and symptoms consistent with diagnosis of: s/p L TKA (10/27/25)

Contraindications to Therapy

None.

Rehab Prognosis/Potential

Assessment

Patient Assessment / Diagnosis

Pt had an MUA yesterday and is presently at L knee ROM WNL. The patient demonstrates significant progress toward remaining functional long-term goals, with improvements noted in strength and ROM. Current presentation indicates progressing tolerance and improved ability in performing functional tasks such as ADLs and ambulation. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

PN 12/15: Barbara tolerated treatment session fairly well today. Objective measurements re-assessed today on her 17th visit. She has met 3 of her 6 long term goals. She has made good progress functionally. She still feels frustrated that she is working on her ROM so hard but still having pain. Her L knee ROM measures at 4-100 degrees which is really not behind for this stage post op (7 weeks since surgery). Her strength is measuring well also. Encouraging patient that she is not as behind as she thinks and discussed asking the doctor if there were other ways she could manage her pain/inflammation. She was working on HEP 4x/day but I told patient to back down to 2x/day. Barbara will continue to benefit from skilled PT intervention to address remaining impairments.

11/21: Ms. Kimmich has attended a total of 10 visits and has met 2 functional long-term goals. The patient demonstrates significant progress toward remaining goals, with improvements noted in strength, ROM and decrease pain levels. Current presentation indicates progressing tolerance in performing functional tasks such as ADLs, ambulation, recreational activities and house hold chores. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

Pt presents with signs and symptoms consistent with diagnosis of: s/p L TKA (10/27/25)

Strength Assessment

During the evaluation, we conducted Gross Muscle Testing. We measured the patient's Knee Flexion, and Knee Extension strength.

On the left side we observed the patient's Knee Flexion to have full range of motion against gravity with maximum resistance, indicating a score of 5 / 5. On the left side we observed the patient's Knee Extension to have full range of motion against gravity with maximum resistance, indicating a score of 5 / 5.

Contraindications to Therapy

None.

Rehab Prognosis/Potential

Excellent

Goals

GOALS			
GOAL	DURATION	GOAL PROGRESS	GOAL TERM
Pt will be able to walk independently for at least 1 mile without significant discomfort in order to resume travel for research and conduct meetings effectively.	12 weeks	(100%)	Long Term
Pt will be able to perform grocery shopping independently at least once a week in order to regain autonomy in managing home duties and running errands.	12 weeks	(100%)	Long Term
Pt will be able to cook meals for at least 5 hours per week in order to manage household responsibilities and maintain a balanced diet.	12 weeks	(100%)	Long Term
Patient will decrease Left Knee pain to 0-1 / 10 in order to improve ambulating.	8 weeks	(75%)	Long Term
Pt will increase the LEFS score to >= 60 indicative of an increase in overall functional mobility and decrease in pain.	8 weeks	26 --> 47 --> 56 --> 55 (current) (75%)	Long Term
Pt will increase L knee AROM to 0-110 degrees.	8 weeks	(100%)	Long Term
Pt will increase L knee AROM to 0-120 degrees.	8 weeks		Long Term

Plan

Notes on Plan

Continue PT POC and progress as tolerated.

Functional, therapeutic, exercise-based, and manual therapies will be provided throughout treatment. Home exercises will be sent and monitored via patient education programming. Pt will be educated throughout treatment plan to ensure that they understand their condition, and instructions as to progress with their function. PT strongly recommends conservative management w/ emphasis on general stretching, strengthening, and functional mobility training.

Possible Procedures Treated over full course of treatment

97161, 97530, 97112, 97140, 97014

Possible Modalities Treated over full course of treatment

Additional Modalities: The following modalities may be used throughout the Physical Therapy Plan of Care in order to provide pain relief, decrease inflammation, increase blood flow, and/or improve tissue healing: manual therapy techniques, aquatic therapy, electrical stimulation, dry needling, hot/cold packs, vasopneumatic compression, ultrasound and kinesiotaping.

Patient Education

Patient has been educated on the rehabilitation process involving the likely mechanism of injury, diagnosis, prognosis, plan of care and other particular documents that are within the scope of Physical Therapy Practice. PT assigned and reviewed HEP for competence, and the patient has demonstrated independence w/ accessing and executing it.

FREQUENCY OF TREATMENT	DURATION OF TREATMENT
3x every week	until 12/11/2025
2x every week	until 12/18/2025
2x every week	until 1/31/2026

Subjective Analysis

Patient Self-Report

Pt w/ no new c/o and says they were able to get her to 120 degrees during the MUA.

HPI: The patient is a 55-year-old female who serves as a Director of Research and Development and is presenting for post-operative rehabilitation following a left total knee arthroplasty (L TKA) performed on October 27, 2025.

Current Functional Limitations

- Mobility:** Walking, Moving Around in Different Locations
- Carrying:** Community Integration/Access, Recreation

Outcomes Survey Results

SURVEY COMPLETED	SURVEY SCORE
Lower Extremity Functional Scale	55.0
Assessment and Additional Comments	The patient completed a Lower Extremity Functional Scale survey. They answered a total of 20 out of 20 questions. The score was calculated as 55.0.

Subjective Analysis

Patient Self-Report

Pt reports a 5/10 pain prior to session.

=====

HPI: The patient is a 55-year-old female who serves as a Director of Research and Development and is presenting for post-operative rehabilitation following a left total knee arthroplasty (L TKA) performed on October 27, 2025.

Objective Analysis

Assessment

Patient Assessment / Diagnosis

Pt tolerated session well w/ no adverse events. Session focused on LE strengthening and ROM. Pt had good recall of exercises. Pt was able to perform all exercises without any compensatory effects. Pt will continue to benefit from skilled PT intervention to address remaining impairments.

PN 12/15: Barbara tolerated treatment session fairly well today. Objective measurements re-assessed today on her 17th visit. She has met 3 of her 6 long term goals. She has made good progress functionally. She still feels frustrated that she is working on her ROM so hard but still having pain. Her L knee ROM measures at 4-100 degrees which is really not behind for this stage post op (7 weeks since surgery). Her strength is measuring well also. Encouraging patient that she is not as behind as she thinks and discussed asking the doctor if there were other ways she could manage her pain/inflammation. She was working on HEP 4x/day but I told patient to back down to 2x/day. Barbara will continue to benefit from skilled PT intervention to address remaining impairments.

11/21: Ms. Kimmich has attended a total of 10 visits and has met 2 functional long-term goals. The patient demonstrates significant progress toward remaining goals, with improvements noted in strength, ROM and decrease pain levels. Current presentation indicates progressing tolerance in performing functional tasks such as ADLs, ambulation, recreational activities and house hold chores. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

Pt presents with signs and symptoms consistent with diagnosis of: s/p L TKA (10/27/25)

Contraindications to Therapy

None.

Rehab Prognosis/Potential

Excellent

Goals

GOALS			
GOAL	DURATION	GOAL PROGRESS	GOAL TERM
Pt will be able to walk independently for at least 1 mile without significant discomfort in order to resume travel for research and conduct meetings effectively.	12 weeks	(100%)	Long Term
Pt will be able to perform grocery shopping independently at least once a week in order to regain autonomy in managing home duties and running errands.	12 weeks	(100%)	Long Term
Pt will be able to cook meals for at least 5 hours per week in order to manage household responsibilities and maintain a balanced diet.	12 weeks	(100%)	Long Term
Patient will decrease Left Knee pain to 0-1 / 10 in order to improve ambulating.	8 weeks	(75%)	Long Term
Pt will increase the LEFS score to >= 60 indicative of an increase in overall functional mobility and decrease in pain.	8 weeks	26 --> 47 --> 56 --> 55 (current) (75%)	Long Term
Pt will increase L knee AROM to 0-110 degrees.	8 weeks	(100%)	Long Term
Pt will increase L knee AROM to 0-120 degrees.	8 weeks		Long Term

Plan

Notes on Plan

Continue PT POC and progress as tolerated.

Functional, therapeutic, exercise-based, and manual therapies will be provided throughout treatment. Home exercises will be sent and monitored via patient education programming. Pt will be educated throughout treatment plan to ensure that they understand their condition, and instructions as to progress with their function. PT strongly recommends conservative management w/ emphasis on general stretching, strengthening, and functional mobility training.

Possible Procedures Treated over full course of treatment

97161, 97530, 97112, 97140, 97014

Possible Modalities Treated over full course of treatment

Additional Modalities: The following modalities may be used throughout the Physical Therapy Plan of Care in order to provide pain relief, decrease inflammation, increase blood flow, and/or improve tissue healing: manual therapy techniques, aquatic therapy, electrical stimulation, dry needling, hot/cold packs, vasopneumatic compression, ultrasound and kinesiotaping.

Patient Education

Patient has been educated on the rehabilitation process involving the likely mechanism of injury, diagnosis, prognosis, plan of care and other particular documents that are within the scope of Physical Therapy Practice. PT assigned and reviewed HEP for competence, and the patient has demonstrated independence w/ accessing and executing it.

FREQUENCY OF TREATMENT	DURATION OF TREATMENT
3x every week	until 12/11/2025
2x every week	until 12/18/2025
2x every week	until 1/31/2026
2x every week	until 2/28/2026

Assessment

Patient Assessment / Diagnosis

Pt tolerated treatment session well today. Session focused on improving knee ROM and strengthening. We emphasized getting as much knee flexion as possible today. Pt. was able to perform all prescribed exercises with proper form and mechanics. Pt will continue to benefit from skilled PT intervention to address remaining impairments and return to PLOF.

PN 12/15: Barbara tolerated treatment session fairly well today. Objective measurements re-assessed today on her 17th visit. She has met 3 of her 6 long term goals. She has made good progress functionally. She still feels frustrated that she is working on her ROM so hard but still having pain. Her L knee ROM measures at 4-100 degrees which is really not behind for this stage post op (7 weeks since surgery). Her strength is measuring well also. Encouraging patient that she is not as behind as she thinks and discussed asking the doctor if there were other ways she could manage her pain/inflammation. She was working on HEP 4x/day but I told patient to back down to 2x/day. Barbara will continue to benefit from skilled PT intervention to address remaining impairments.

11/21: Ms. Kimmich has attended a total of 10 visits and has met 2 functional long-term goals. The patient demonstrates significant progress toward remaining goals, with improvements noted in strength, ROM and decrease pain levels. Current presentation indicates progressing tolerance in performing functional tasks such as ADLs, ambulation, recreational activities and house hold chores. Based on clinical findings and patient response to interventions, skilled PT remains necessary to progress toward remaining goals, address residual deficits, and promote optimal functional independence.

Pt presents with signs and symptoms consistent with diagnosis of: s/p L TKA (10/27/25)

Contraindications to Therapy

None.

Rehab Prognosis/Potential

Excellent

Goals

GOALS			
GOAL	DURATION	GOAL PROGRESS	GOAL TERM
Pt will be able to walk independently for at least 1 mile without significant discomfort in order to resume travel for research and conduct meetings effectively.	12 weeks	(100%)	Long Term
Pt will be able to perform grocery shopping independently at least once a week in order to regain autonomy in managing home duties and running errands.	12 weeks	(100%)	Long Term
Pt will be able to cook meals for at least 5 hours per week in order to manage household responsibilities and maintain a balanced diet.	12 weeks	(100%)	Long Term
Patient will decrease Left Knee pain to 0-1 / 10 in order to improve ambulating.	8 weeks	(75%)	Long Term
Pt will increase the LEFS score to ≥ 60 indicative of an increase in overall functional mobility and decrease in pain.	8 weeks	26 --> 47 --> 56 --> 55 (current) (75%)	Long Term
Pt will increase L knee AROM to 0-110 degrees.	8 weeks	(100%)	Long Term
Pt will increase L knee AROM to 0-120 degrees.	8 weeks		Long Term

Plan

Notes on Plan

Continue PT POC and progress as tolerated.

Functional, therapeutic, exercise-based, and manual therapies will be provided throughout treatment. Home exercises will be sent and monitored via patient education programming. Pt will be educated throughout treatment plan to ensure that they understand their condition, and instructions as to progress with their function. PT strongly recommends conservative management w/ emphasis on general stretching, strengthening, and functional mobility training.

Possible Procedures Treated over full course of treatment

97161, 97530, 97112, 97140, 97014

Possible Modalities Treated over full course of treatment

Additional Modalities: The following modalities may be used throughout the Physical Therapy Plan of Care in order to provide pain relief, decrease inflammation, increase blood flow, and/or improve tissue healing: manual therapy techniques, aquatic therapy, electrical stimulation, dry needling, hot/cold packs, vasopneumatic compression, ultrasound and kinesiotaping.

Patient Education

Patient has been educated on the rehabilitation process involving the likely mechanism of injury, diagnosis, prognosis, plan of care and other particular documents that are within the scope of Physical Therapy Practice. PT assigned and reviewed HEP for competence, and the patient has demonstrated independence w/ accessing and executing it.

FREQUENCY OF TREATMENT	DURATION OF TREATMENT
5x every week	until 3/14/2026
3x every week	until 4/25/2026

SERVICES PROVIDED DURING VISIT

CPT CODE	UNITS	MINUTES
97530	2.000	30
G0283	1.000	10
97110	1.000	20
Total Timed Code Treatment Minutes		50
Total Treatment Time		60

The patient (parent/guardian/power of attorney holder) was educated on diagnosis, prognosis, and treatment goals and actively participated in creating goals and agrees to the current treatment plan.
